Professional Summary

Results-driven Applied AI & Backend Engineer architecting scalable, production-grade systems serving **21,700+ cumulative users**. Expert in integrating advanced LLM capabilities (RAG, Vector DBs, Agent Orchestration) with robust Node.js and Python microservices. Proven track record of independently owning the product lifecycle and leveraging AI tooling (**Claude Code, Copilot**) to rapidly ship secure, high-performance applications.

Education

Gyan Ganga Institute of Technology and Sciences
B.Tech. in Computer Science & Engineering (AI & ML) | CGPA: 7.70

Jabalpur, MP
Graduated May 2026

Technical Skills

Languages: Python, TypeScript/JavaScript, SQL, Bash

Frontend: React.js, Next.js, Tailwind CSS

Backend & Core: Node.js, Express.js, Flask, REST APIs, OOP, JWT, OAuth 2.0, Microservices

Databases: PostgreSQL, Prisma, SQLAlchemy, MongoDB, Vector DBs (Pinecone, Milvus, pgvector)

Cloud & DevOps: AWS, Docker, Git, GitHub Actions, Linux, CI/CD, AI Monitoring (Latency/Tokens)

AI Integration: Claude Code, GitHub Copilot, Gemini API, LangChain, LangGraph, Multimodal AI, RAG Architecture

Applied AI & LLMops: vLLM, Model Serving (Llama, DeepSeek), AI Evaluation, LLM Reliability (Guardrails), Structured Outputs (JSON/Tool Calling), Prompt Injection Mitigation, Agent Orchestration, A/B Testing

Experience

Prominent Digitech Solution & Associates

Remote

Full-Stack Developer (Full-Time Intern)

Dec 2024 – May 2026

- Architected and deployed highly available Node.js backend services, owning feature delivery, relational schema design, and SQL optimization to support **500+ daily API requests** with sub-second latency.
- Spearheaded the integration of context-aware LLMs into automation workflows for complex customer interactions, driving a **35% reduction** in support turnaround time while maintaining response accuracy.
- Maintained production applications and executed continuous CI/CD deployments, systematically leveraging **Claude Code & GitHub Copilot** to rapidly debug logs and ensure high system reliability.

Projects

Faultline (VS Code Extension) | *TypeScript, AST Parsing, LLMs*

[Marketplace](#) | [GitHub](#)

- Architected and launched a developer productivity tool reaching **20,200+ downloads**, independently managing the complete software lifecycle from technical requirements through CI/CD releases.
- Engineered an LLM-powered assistant to perform runtime AST analysis, providing contextual error explanations and automated code fixes that significantly accelerated debugging workflows.

Null-Secret (Secure Secret Sharing) | *Node.js, Prisma, PostgreSQL, CI/CD*

[Live](#) | [GitHub](#)

- Designed a zero-trust Node.js and Prisma backend supporting **1,500+ users**, implementing end-to-end zero-knowledge encrypted storage and automated OTP validation mechanisms.
- Orchestrated a resilient CI/CD pipeline via **GitHub Actions** to autonomously ship feature updates, critical security patches, and scheduled database expirations directly to live production.

Smart Money (AI Financial Advisor) | *Flask, PostgreSQL, Docker*

[GitHub](#)

- Engineered a high-throughput financial backend utilizing **Flask, PostgreSQL, and SQLAlchemy** for robust real-time market data ingestion and secure user authentication flows.
- Integrated the **Gemini API** to synthesize personalized financial analytics and deployed the containerized microservice architecture using production-grade **Docker** workflows.

Pegasus (Autonomous AI Orchestrator) | *Python, API Design, LLMs, CLI Automation*

[GitHub](#)

- Engineering a fault-tolerant multi-agent orchestration platform designed to translate high-level user objectives into deterministic execution plans across multiple foundational LLMs.
- Constructing a unified CLI adapter to intelligently delegate atomic subtasks (Claude, Gemini), enforcing continuous execution, context-retention, and iterative refinement loops.

Honors and Achievements

- **Developer Tool Author:** Architected and continuously maintained an open-source VS Code extension, driving a combined reach of **21,700+ cumulative users/downloads** across software projects.
- **Finalist (4th Place), Delhi Nexify Hackathon:** Led backend architecture and AI integration for the Smart Money prototype, outperforming **100+ competing teams** from across India.
